

1. OVERVIEW

This research was undertaken to build a shared vision of what a green humanitarian system could look like. It aims to establish a desired end state, or shared goal, that the sector can collectively work towards. It unpacks existing evidence and understanding of the humanitarian sector's climate and environmental impact, and identifies key focus areas, barriers, and enablers to move the sector towards greener ambitions.

2. METHODS

Key informant interviews with **27** stakeholders across **8** countries

Comprehensive desk review of **40+** documents

Behavioural science framing and analysis

4 focus group discussions with **65+** representatives in **4** countries

Social media data collection – videos and polls shared by **3** research partners, attracting engagement from over **378** people

3. THE VISION

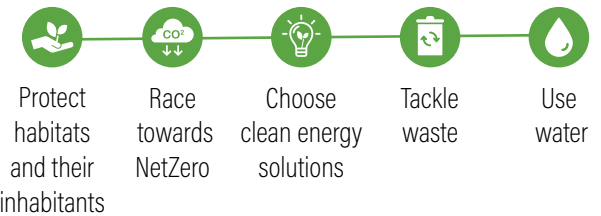

The Foundations

- ✓ **Principled humanitarian action** is defined by protection and promotion of the climate and the environment
- ✓ **All humanitarians are individually and institutionally** upholding and promoting environmental responsibilities
- ✓ A greener humanitarian system is a more **localised humanitarian system**
- ✓ **Donor support and messaging is coordinated, consistent and continuous;** the 'cost' of environmental stewardship is considered and accepted
- ✓ **Goals are shared by all stakeholders,** including the private sector and environmental agencies

4. HOW DO WE GET THERE?

The Vision identifies five key areas to focus sector efforts for the greatest impact, and proposes key priorities and objectives to achieve the vision. These key areas also serve as the basis for the [Framework for Greening Humanitarian Action in the Pacific](#), which provides an operational framework and actions to progress identified priorities.

Key Focus Areas – OUR VISION for how we:

5. WHAT'S NEXT?

This Vision was used as the foundation for the development of the [Framework](#), in efforts to operationalise the Vision with a practical and accessible tool that is contextualised for the region. It also served as the basis for the study, [Pathways Toward a Green Humanitarian Response](#), which explores key behavioural barriers and enablers to shift the sector towards greener practices. The Vision will continue to evolve and shift with new challenges and innovations. It serves as an ambitious goal to align and unify the sector in the shift towards greener humanitarian action.
